

Ayehu eyeShare – VMWare Activities

VMware Guests

Name	Description
VM Clone	Clones a Virtual Machine.
VM Create	Creates a Virtual Machine.
VM Create Configuration Spec	Creates a Virtual Machine configuration specification file that can be used when cloning a Virtual Machine.
VM Create From Template	Creates a Virtual Machine from a template.
VM Delete	Deletes a Virtual Machine.
VM Delete Configuration Spec	Deletes a Virtual Machine's configuration specification.
VM Exists	Checks whether or not a specific Virtual Machine exists.
VM Info	Retrieves a Virtual Machine's information.
VM List	Retrieves a list of Virtual Machines on a specific host.
VM Modify CPU	Modifies the count of CPUs of a Virtual Machine.
VM Modify Memory	Modifies the Virtual Machine's available memory.
VM Mount ISO	Mounts an ISO image file on a Virtual Machine.
VM Power CLI	Executes a command in Power CLI.
VM Power Off	Switches a Virtual Machine off.
VM Power On	Switches a Virtual Machine on.
VM Power State	Retrieves the power state of a Virtual Machine.
VM Reboot	Reboots a Virtual Machine.
VM Rename	Renames a Virtual Machine.
VM Reset	Resets a Virtual Machine.
VM Resize Disk	Resize a Virtual Machine's disk.
VM Shutdown	Shuts down a Virtual Machine.
VM Standby	Puts a Virtual Machine into standby mode.
VM Suspend	Suspends a Virtual Machine.

VMware Hosts

Name	Description
VM Folder Create	Creates a Virtual Machine folder on a server (ESX or vCenter).
VM Host Enter Maintenance Mode	Puts the Virtual Machine's host into maintenance mode.
VM Host Exit Maintenance Mode	Terminates the Virtual Machine's host maintenance mode.
VM Host List	Get a list of all VM hosts in the vCenter.
VM Host Reboot	Reboots the Virtual Machine's host.

VMware Snapshots

Name	Description
VM Create Snapshot	Snapshots a Virtual Machine's state.
VM Current Snapshot	Retrieve's the name of the Virtual Machine's current Snapshot.
VM Delete All Snapshots	Deletes all Snapshots of a Virtual Machine.
VM Delete Snapshot	Deletes a selected Snapshot of a Virtual Machine.
VM List Snapshot	Lists all Snapshots of a Virtual Machine.
VM Rename Snapshot	Renames a Snapshot of a Virtual Machine.
VM Revert to Current Snapshot	Reverts to the current Snapshot of a Virtual Machine.
VM Revert to Snapshot	Reverts to a Snapshot of a Virtual Machine.
VM Snapshot Info	Retrieves the info of a Virtual Machine's selected Snapshot.

VMware Templates

Name	Description
VM List Templates	Lists all existing VM templates in the vCenter.
VM Mark Template	Marks a Virtual Machine as a template.
VM Unmark Template	Removes a template mark from a Virtual Machine.
